riseset_notebook

April 1, 2023

1 `riseset` Examples

This notebook demonstrates the J `riseset` script. `riseset` computes the rise, transit, and set times of named IAU Stars.

To run this notebook you must install a J jupyter kernel. See Martin Saurer's GitHub repository for instructions.

[1]:
```
NB. J version and date
smoutput 9!:14 ''

2023 4 1 11 49 24.274
```

1.1 Installation

`riseset` is distributed as a J addon. It is installed in the J `~addons/jacks` folder. It can be installed from GitHub with:

[2]:
```
load 'pacman'
NB. smoutput install 'github:bakerjd99/jackshacks' NB. uncomment to install
```

The `jacks` (J-hacks) addons are self contained JOD generated J scripts. Each `ijs` script is accompanied with `pdf` document that describes how to use it. Some scripts, like `riseset` are also packaged with a Jupyter notebook (this file) and a `pdf` version of the notebook. For example, the `riseset` files are:

```
riseset.ijs
riseset.pdf
riseset_notebook.ipynb
riseset_notebook.pdf
```

There are other scripts in `~addons/jacks` and more will be added from time to time. To refresh the folder, reissue the install command.

In addition to these files the subfolder `~addons/jacks/testdata` contains data files. `riseset` files in `testdata` are:

```
Bright_Stars_Meridian_Almanac_23mar27.md
iau_named_stars_2022.txt
Navigation_Stars.txt
```

[3]:
```
NB. addon files
dir '~addons/jacks'

```

Additional stars/objects can be added by editing the IAU file or by doing the following.

New objects need a name, right acension (RA), and declination (Dec) for the J2000.0 epoch.

```

1.3 Maintaining and modifying `riseset`

All `riseset` code, documentation and test scripts are stored in the JOD dictionary `futs`. To change the code or run the test cases you need to install the JOD dictionaries `futs` and `utils`.

Use J's package manager to install the JOD addons `general/jod`, `general/joddocument`. If you have installed all the addons JOD is already on your system.

After installing JOD do:

1. Download the JOD dump scripts:

   https://github.com/bakerjd99/joddumps/blob/master/utils.ijs

   https://github.com/bakerjd99/joddumps/blob/master/futs.ijs

and put them in a `~temp` folder.

2. Start JOD and check for the presence of `futs` and `utils`.

```
NB. start JOD
load 'general/jod'
(;:'futs utils') e. od''
```

3. **Only if both dictionaries are missing do:**

```
newd 'utils'  NB. creates utils dictionary in '~user/joddicts/utils'
newd 'futs'   NB. creates futs in '~user/joddicts/futs'
```

4. Load the dictionares:

```
NB. load utils first
od 'utils' [ 3 od ''
0!:0 <jpath '~temp/utils.ijs'
NB. rebuild references
0 globs&> }. revo ''
NB. take first binary backup
packd 'utils'

NB. load futs with utils on path
od ;:'futs utils' [ 3 od ''
0!:0 <jpath '~temp/futs.ijs'
NB. rebuild references
0 globs&> }. revo ''
NB. take first binary backup
packd 'futs'

NB. close dictionaries
3 od ''
```

The rest of this notebook *assumes* you have installed `futs` and `utils`.

It also assumes a basic knowledge of JOD. See the JOD Manual for details. The JOD Manual is distributed in the `general/joddocument` addon - see:

```
~addons/general/joddocument/pdfdoc/jod.pdf
```

`jod.pdf` is also available on The JOD Page

1.4 `riseset` test suite

Many `riseset` test cases are in `futs`. Groups of test cases are called suites. The contents of the `riseset` suite is:

[11]:
```
NB. open futs and utils - assumed open until notebook end
load 'general/jod'
od ;:'futs utils' [ 3 od ''
```

```
+-+----------------+----+-----+
|1|opened (rw/ro) ->|futs|utils|
+-+----------------+----+-----+
```

[12]:
```
NB. list test cases in (riseset) suite
,. 3 grp 'riseset'
```

```

1.5 Building `riseset`

There are a number of test scripts in `futs` that build and distribute `riseset`. These scripts are tuned to my environment but they do illustrate how to *make* a distribution script.

[15]:
```
NB. show main riseset maker
smoutput 1 disp 'build_riseset'
3 od ''
```

```
NB.*build_riseset t-- build (riseset) and distribute.
NB.
NB. created: 2023mar09
